Today Google CEO Sundar Pichai highlighted efforts to help American high schoolers succeed in the AI era, including our recent \$1 billion commitment to support education and job training programs in the U.S. and offering Gemini for Education to every high school in America.

Editor's note: Today Sundar Pichai spoke at the White House Panel on AI Education event in Washington, where he highlighted our efforts to support AI education, including offering Gemini for Education to every high school in America. Below is an edited transcript of his remarks.

Mrs. Trump, Director Kratsios, esteemed Cabinet officials, hello.

It's an honor for me to be here and to support the First Lady's Presidential AI Challenge. Through this initiative, you are inspiring young people to use technology in extraordinary ways.

This is deeply important to me. Having regular access to computers changed my life, and led me on the path to Google.

I was drawn to its mission: to organize the world's information and make it universally accessible and useful. Today we see AI as the most profound

way we will deliver on that mission — and transform knowledge and learning.

We can imagine a future where every student, regardless of their background or location, can learn anything in the world — in the way that works best for them.

We've been focused on this for decades. It's why we built Chromebooks for every classroom, and why we've worked to make our AI model, Gemini, the world's leading model for learning.

It's also why we're offering [Gemini for Education](#) to every high school in America. That means every high school student and every teacher has access to our best AI tools, including Guided Learning — tools that could be helpful for students taking the AI Challenge.

We also [recently committed \\$1 billion](#) over the next three years to support education and job training programs in the U.S. And today, I'm excited to share that \$150 million of that \$1 billion will go towards grants to support AI education and digital wellbeing.

This includes \$3 million to [code.org](#) to transform its curriculum and integrate new AI features. We're also providing \$2 million to the [Flourish Fund](#) to support nonprofits equipping youth aging out of the foster care system with tools to succeed in the workforce.

For college students, our [AI for Education Accelerator](#) has expanded from 100 colleges and universities to 200, including the Texas A&M University System and Iowa's community colleges.

And we've set up a centralized [place on the web](#) for teachers and parents to get all of our best AI training in one place, something we've heard can be really helpful.

This is all in service of helping the next generation solve problems, fuel

innovation and build an incredible future. These are goals we all share. We are incredibly thankful for the partnership of everyone in this room, and to the First Lady and the Administration for leading the way. Thank you.
